

Sara Garbarino

Curriculum Vitae

Research Interests

- Theoretical mathematical modelling, inverse problems, graph theory, regularization theory, compartmental analysis, image processing
- Methodical computational modelling, statistical methods, convex optimization
- Applications mechanistic and data-driven model for the progression of neurological diseases, biomedical imaging and computing: data from PET and micro-PET, X-ray CT and MRI

Position

- Apr 2018 – to date **Research Fellow**, EPIONE TEAM *INRIA Sophie Antipolis*, Research Fellow of the "Universite de la Cote Azure Excellence Program" with the project "A data-driven model of mechanistic brain Atrophy Propagation in Dementia (AtroProDem)".

Research Experience

- Mar 2016 – **Research associate**, CMIC *University College London*, H2020 European Projects
- Mar 2018 "European Progression Of Neurodegenerative Disease initiative" (EuroPOND), supervisor: Prof. Daniel Alexander.
- Jan 2015 – **Postdoctoral research fellow**, MIDA GROUP *Mathematics Department, University of Genoa*, supervisor: Prof. Michele Piana, Computational and inversion methods with applications to biomedical data.
- Feb 2016

Research Groups Membership

- 2018 – to date **Member of "Epione team"**, *INRIA Sophia Antipolis*, www.inria.fr/epione.
- 2016 – 2018 **Member of "Centre for Medical Image Computing (CMIC) group"**, *Computer Science Department, University College London (UCL)*, www.ucl.ac.uk/cmhc.
- 2017 – 2018 **Post-doc representative at the "Athena Swan for Gold Award Committee" for promotion of gender equality and women in science**, *Computer Science Department, University College London (UCL)*.
- 2012 – 2016 **Member of "Methods for Image and Data Analysis (MIDA) group"**, *Mathematics Department, University of Genoa*, www.mida.dima.unige.it.
- 2012 – to date **Research associate of GNCS – INdAM**.
- 2012 – 2016 **Research associate of CNR – SPIN**.

Projects and Grants

PI

- 2018 **LYSM International Associated Laboratory grant for conferences**, 750 Euro.
- 2018 **UCA Excellence Project - Individual Support for Young Researchers**, 103,222.64 Euro.
- 2018 **EPSRC platform grant - CMIC pump priming award**, 9,150 GBP.
- 2015 **GNCS (National Group for Scientific Computation) Young Researcher Grant**, 950 Euro.
- 2013 **GNCS (National Group for Scientific Computation) Young Researcher Grant**, 700 Euro.
- 2012 **GNCS (National Group for Scientific Computation) Young Researcher Grant**, 900 Euro.
- 2012–2014 **PhD-Scholarship**, *Italian Ministry of Education, University and Research*.

Participation

- 2016–2018 **Co-Scientific Manager**, for the H2020 European Projects "European Progression Of Neurodegenerative Disease initiative" (EuroPOND), PI: Prof. Daniel Alexander.

Software

- 2015 **Inversion of LIDAR data**, *Matlab and C# software developed for Advanced Lidar Applications (ALA) Srl, implementing inversion techniques for reconstruction of aerosol particles properties from LIDAR data.*
- 2012 **Denoising of MRI images**, *Matlab software developed for Paramed Srl, implementing post-processing denoising of Magnetic Resonance images.*

Publications

My research is primarily concerned with applications of mathematical modelling and inverse problem in a biological framework. During my PhD, I developed compartmental models to study the physiological and pathological behaviour of glucose metabolism in tissue, using micro-PET data. I have dealt with modelling the hepatic and the renal metabolism, under normal or cancerous conditions. I have studied the impact of anticancer drugs by measuring the effects on the parameters estimated by my models. During my first PostDoc, I have been involved into a collaborative project between the MIDA group, ALA srl and the Beijing Meteorologic Centre to develop inversion techniques for reconstructing aerosol profile from atmospheric LIDAR data. Nowadays my major interest is in the application of inverse problem and graph theory techniques for modelling neurodegenerative diseases development and progression. In particular I am interested in the construction of Network Propagation Models, whose attempt is to explain disease progression in terms of spatial propagation through anatomical or functional networks in the brain, which thus induce measurement changes sequentially along the nodes of a network. The pattern of propagation depends on, and can thus reveal, mechanisms of propagation. In the following my publications (10 published on journals/4 published conference proceedings /1 in press).
